

**SAP Netweaver - Enterprise Portals Technical Consultant
Toronto/Ottawa/Montreal**

The incumbent has the responsibility to perform fully competent Portals consulting services for our client's customers on a billable basis. They ensure that customers have successful SAP implementations and a high degree of customer satisfaction in our product and services.

KEY RESPONSIBILITIES:

Has responsibility for successful implementation of the SAP product at a customer's site.
Analyzes and maps clients' business requirements and objectives; develops necessary product modifications to satisfy client's needs.
Provides functional expertise, guidance, presentation, and instruction on SAP products to clients.
Acts as a liaison for troubleshooting: investigates, analyzes, and solves software problems.
Maintains one's own professional development; including continuous learning of new SAP products/technologies, and communicating experiences and solutions to fellow colleagues.
Accurately maintains documentation of time and expense reports, along with additional administrative tasks.
Assists with preparation of training materials; teach on-site classes as required.
Provides mentoring/support to inexperienced colleagues.

SKILLS REQUIRED:

Completion of college or university degree, preferably in computer sciences or related areas
Minimum 3+ years technical experience in one or more of the following: Web application servers, ITS, Security, ABAP, BAPIs, Upgrades, CRM and APO.
Minimum 3+ years in Web/portal technical and implementation project experience.
Demonstrated expertise in Java analysis, development, testing and implementation; Web-based architectures, specifically Microsoft-centric technology solutions (Windows 2000, SQL Server, Oracle, IIS), and UNIX-centric solution technologies, in one or more of the following: Sun Solaris, HP-UX, AIX, Oracle, IBM DB2, Apache.
Must have experience with integration to back-end systems (for example, SAP, PeopleSoft, Oracle or Siebel) and all phases of portal project lifecycle including multiple installations, upgrades and modifications are required.
Expertise in web development is also essential. Java, JavaScript, ASP, HTML, HTMLB, XML, .NET and web services are all requirements.
