

Senior Production Engineer- Calgary, AB

Description:

Major Oil and Gas operator seeks a Senior Production Engineer to be based in Calgary, Canada. Ideally the Client is looking for candidates who are already authorised to work in Canada.

Working within a fully integrated team you will be responsible for providing production engineering expertise for the offshore deepwater gas field development project and other fields within the Project South East Asia portfolio. This role requires experience in deepwater gas developments, including experience in Subsea development, design, production and analysis.

The position will initially be Calgary based but incumbent must be willing to relocate to SE Asia if required.

Specific responsibilities include:

- Acting as a technical specialist and resource to the team on all production engineering matters
- Preparing recommendations and documentation in support of deepwater gas field development and production engineering
- Design and support well completion, re-completion, stimulation and abandonment
- Design and implement workover, artificial lift and sand control
- Initial and final production rate (IPR/TPR) outflow performance evaluation and tubing selection along with optimum rate determination
- Well performance analysis, diagnosis and well surveillance
- Production, injection data management for daily data reporting and analysis
- Ensure adequate well start-up and shut-down procedures are prepared and followed for deepwater wells
- Assist in the development and implementation of flow assurance techniques and program
- Identify risks and risk mitigation strategies/actions
- Close liaison with Drilling and Completions, Facilities and Reservoir Engineers. Liaise with well and well services Supervisor for well operations
- Work with cross-functional team, including FEED team to achieve well and field optimization
- Implement project plans and schedules in a timely manner
- Ensuring that a culture of strong and effective team-work exists the subsurface Team
- Interface with partners and government authorities

Our ideal candidate will have the following qualifications:

- An Engineering Degree, preferably in Petroleum Engineering. A Masters degree in Geosciences would be a definite asset
- 15 years of Production Engineering experience

- 10 years of international exploration and offshore/deepwater gas field development/production experience, including subsea development/operations, design, production and analysis
 - Solid working knowledge with downhole tools and equipment including onshore and offshore operations
 - Working knowledge of geology and reservoir engineering
 - Proven ability to work in a team environment dealing with people from various disciplines to achieve goals, and to identify and resolve problems
 - Strong command of the English language, with good oral and written communication skills
-
