

Client has an immediate opening for a Team Leader Hazardous Materials. As a Hazardous Materials specialist, you will work within the Brownfields and Urban Site Management group in Calgary and report to the group leader. You will also work more broadly with our BC and Alberta groups to develop a consulting business undertaking building surveys and abatement for asbestos, lead, and PCBs. You will provide services in a broad range of projects that involve audits, hazardous material management and health & safety aspects of contaminated sites management. You will be expected to have direct contact with existing clients and develop new clients, manage Hazardous Materials components of larger projects, develop proposals, including work scope and budgets, manage the resulting projects, and build a team of specialists reporting to you.

As an expert in federal and provincial regulations and industry best practices you will be expected to provide clients with information on compliance of building systems with all applicable regulations. You will be expected to lead the growth of a superior Hazardous Materials team in the Calgary office.

Qualifications:

The ideal candidate will possess the following:

A University Degree or equivalent Technical Certification from a recognized institution;

A senior technologist or senior intermediate engineer/scientist with a minimum of 10 years in the Hazardous Materials and Abatement consulting;

Experience in identifying and dealing with asbestos, lead, PCBs, mould, industrial hygiene and Indoor Air Quality

Appropriate professional designation such as CET; ASCT.

Additional Information:

We offer a comprehensive benefit package. Compensation will be commensurate with education and experience.
